

# **Newsletter Areos-Energie AG dd. 23<sup>rd</sup> of November 2020**

## **Foreword by the management**

Dear investors and friends of Areos-Energie AG

The second wave of the virus has reached us and the third is already being predicted.

This fact has led to further delays for us.

Since we have to assume that we will break even (profit threshold) approx. 6 months later than originally forecast, we have reduced our costs.

Nevertheless, we are now entering the final phase of building the prototype. The location has been found and the plans have been drawn. All materials for the construction are defined and we are confident that by 3.1. be able to break the ground. If the situation permits, some of our consultants and management, as well as Professor Petrovic, will be there to celebrate this ceremony.

We wish you a peaceful and peaceful Advent season and thank you very much for the trust you have placed in us.

Stay healthy!

Sincerely yours

Albert Engbers

---

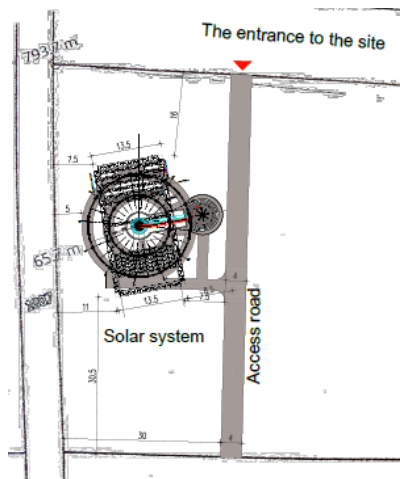

## **Financing**

For the construction of the prototype, we decided to start another financing round under the previous conditions. The reason for this is the costly delay of the construction due to Covid19. The current prices per share can be found on our website. This will be the last sale of shares on special terms. If you are interested in a further investment, please contact:

## **Construction of the prototype**

You can see the layout of the pilot plant on the adjacent plan. For the construction of the pilot plant, we made some changes compared to the standard so that the necessary measurements and any changes can be carried out faster and more cost-effectively.

Our research department will be built on the free part of the property. In this, not only will the existing system be further developed, but various peripheral systems will also be tested and standardized.

The first project for the R&D department was to increase the efficiency of power generation. The plant will be built near Belgrade in the immediate vicinity of Termoprojekt.

The current status of the components is as follows:

Steel construction and construction on site is done by the Thermoprojekt. The glass for the cover of the absorber comes from a German manufacturer, the absorber and the fan are in the stadium of the tender, a definitive decision has not yet been made. All pressure lines and connections of the heat storage will be supplied by Pumilia AG. We were able to find a highly technical and inexpensive product in Germany for the mirrors. The reflection of this medium is over 99% and beats any glass mirror.

As soon as the construction site is set up, we will set up cameras and stream the construction live on our website.

## Krypto Mining

Unicrypt AG has launched a Solar Crypt Token.

This token can be purchased via the Unicrypt platform and possession of the token is equivalent to buying a share in the mining farm.

The token includes a weekly capital payment in the amount of 0.2 - 0.3% of the capital employed. This corresponds to a return of 10% + per year. The homepage will be launched in the next few days.

Of course, you will then find the link on our Areos Energie AG homepage.

**SolarCrypt** Home Introduction Why we tokenize How it works Profit & Costs Our team Platform

THE ULTIMATE CRYPTO MINING FARM BY

### SolarCrypt Ltd.

**Mining consumes more than 60 TWh per year which is equal to the entire electricity consumption of Switzerland**

Crypto Currencies have gained their place in our society. The greater acceptance and the higher usage of Bitcoin & Co. leads also to a higher energy consumption. At the same time, the generation using crypto currencies is also engaged in fighting the climate change. Solar Crypt is joining this fight by offering a completely new approach to mining...
